The model has two variants:

- **SINGLE PART** - the rim is printed all at once
 - many supports,
 - no assembly needed
 - low accuracy of the axle hole
- **2 PART** - the rim is divided into top and bottom part (shown on photos)
 - assembly with supergule or gluegun needed
 - less supports
 - can use ugly filament for the bottom part
 - axle hole printed directly on bed - better accuracy and fit OK to LEGO axles
 - if printed from STEP file, need to be divided into objects manually
