Summary

Small cups to play with toy kitchens

[Toys & Games](#) > [Other Toys & Games](#)

Tags: [kitchen](#) [toy](#) [ikea](#) [kids](#)

This print was one of those completely spontaneous ones. It turns out that Santa Claus brought a little IKEA kitchen to the little one, so she's fully engaged with it. One of her favorite things is some plastic cups and glasses from IKEA, which she literally transports from one place to another all day long.

So, I decided to quickly design some small cups that are easy to print and stackable in various colors to provide more variety. I can only say that she loved them! It's one of the designs that I've been thanked for the most in a long time, hahaha.

The cups are nothing extraordinary, but if you have little ones who love playing with utensils, they will surely appreciate it if you think of them and make some toy ones. Besides, it's great to share the whole process with them, from preparing it for printing to choosing the color and putting it in the printer.

As for the settings, nothing out of the ordinary, 0.25mm layer height for a 0.4mm nozzle is more than enough. The only thing is, I used 4 perimeters

to make it solid and more shock-resistant because, believe me, that's another pastime.

Happy printing!
