Well, in German we call this type of lamp installation "Affenschaukel" (monkey swing).

It is a simple model that should be considered more from a design point of view, because its pretty big.

It is also reminiscent of a climbing hold. Especially if you print it out of [Rock PLA](#) like I did.

I used strong double-sided adhesive tape to attach it.

I have attached one to the ceiling and one to the wall to guide the cable.

By the way, the distance to the wall or ceiling is large enough to thread a [Europlug](#) through.

—

printed with:

- PLA
- 0.4 nozzle
- 0.20 speed
- 15% infill
- organic support
- took 4h8m (for 2!)

—

further materials:

- strong double-sided adhesive tape
