Summary

High-strength wall mounts for any shelf with built-in holes for screws or nails.

[Household](#) > [Office](#)

The shelf support brackets even when printed with PLA can hold over 100 lbs (tested) and have built-in mounting holes to attach to the wall. I printed mine on the sides with support material to hold up the hexagon webbing at 50% infill and 4 perimeters @ 0.2mm layer height. Happy Printing!
