[cone](#) [throwing](#) [horseshoe](#)

From some distance, throw a horseshoe around a pin in the center of the arena. It's harder than you think.

The pin is screwed into the center of the arena and replaceable to adjust the difficulty level.

The horseshoe must be completely around the pin for a good score.

Everything can be printed without support.

I recommend printing the arena 0.2 layer high and 10% infill

The pins with 20% infill and the horseshoes with 100% infill for some weight but other settings are fine too.
