Wanted a way to be able to hang the charging brick off the ground in the garage on the leg of a workbench. Uses two screws to hold it up. The mount also allows for a view of the charging light. It was made to fit the charger that came with my Lectric XP 3.0.

I printed it with PLA using 0.2 layer height. I live in Florida and this is in my garage. I don't expect there to be a temp issue since my garage does not get too hot even in the summer.
