I wanted a way to attach the premium headlight for my XP 3.0 to the frame using the 4 bolt pattern on the front of the bike. Instead of leaving a bunch of empty space, I added a GoPro attachment point to use with whatever I wanted. With I did need to add a bit of electrical tape or something rubber between the mounts for the headlight and the actual light bracket to keep it from falling. The plastic on plastic was a bit slippery.

Printed in PLA+ with 0.2 layer height.
