Makes the printer more part of the family...

Inspired from the design of SM26 (46239-prusa-mini-fun-extruder-shield) I made my own version of googly eyes because I don't need the extruder shield. Just wanted those funny googly eyes watching my prints.

This print is made for 12mm googly eyes. They are glued in the print. It is fastened with one M3x12mm Screw at the free tap of the aluminium hotend body. Shorter Screws will also fit.

I printed it in PETG with 0,15mm, but I think PLA will also be sufficient. No support needed. Print Time was about 21 minutes.
