All around best spool holder design that requires no support and mounts with common screws. It has been tested with a 1 kg spool and can be mounted in various positions. This is perfect for mounting in an enclosure, on a wall, under a shelf, or upright on a tabletop, etc.

Print Instructions: Print on the longer flat side, not the mount. Minimum 20% infill recommended, add more as needed. For easier mounting you may want to use an extended Phillips bit.

Update 1/21/22: Uploaded new STL with improved teardrops for better screw fitment. Increased file resolution for smoother curves. Fixed all open

edge errors when loading in the slicer. I removed the old file after testing the new one. Thank you all for your feedback!

Follow and check out my other designs!
