Summary

This is a holder for the 160 watts psu from Meanwell with a smaller radius at the corners.

Mine are printed on a prusa mk3 because i wanted to print it flat, but just as the original, on it's side it will fit on a mini, but you will need a lot of support.

I printed two in petg and two in pla and they all are doing fine.

I don't think the psu is getting hot enough to cause problems with pla.
