Summary

An over-engineered clamp for an aquarium hose to allow drip acclimation of new livestock.

[Household](#) > [Pets](#)

Tags: [aquarium](#) [drip](#) [hoseclamp](#)

This is a hose clamp that can accomodate up to a 5mm diameter aquarium hose. It will allow you to control the flow of water so that you can “drip” water into a container to slowly acclimate new livestock to the conditions of your aquarium.

The wheel should be printed with supports.

You will need the following hardware to assemble the clamp:

- 4x M3 x 8mm or x10mm screws
- 4x M3 hex nuts

Model files

drip-clamp-v2-clamp-wheel.stl

☐ Print this with supports

drip-clamp-v2-clamp-bottom.stl

☐ No supports required, but thjere are some overhangs

drip-clamp-v2-clamp-top.stl

☐ No supports required
