Inevitably, I lost a few caps for my USB drives, so I created a couple of replacements. I have included two different versions, should you have a standard-length drive or something a little longer (like my Vansuny drive). I've only tried these in TPU; the tolerances may be a little too snug for this to work in a rigid material.

### Parameters:

- Printed open end up
- 0.4mm nozzle @ 0.2mm layer height
- Material - TPU
- 100% Infill, 3 walls
- Printer Ender V3 SE
