Hi

I would like to introduce my Kawasaki SX 650 Jetski Car Load System. It was born out of the need that I don't have room for a Jetski trailer. So the SX 650 had to be in my VW Touran. I was inspired by the loading system of a wreck truck for cars. The advantage here is that the system also serves as a trolley for the jet in the garage. The basic system is a normal HAILO S60 rung ladder, on which several aluminium rails with rollers are mounted. The jet stands on it and is secured by a belt winder. This system is loaded via a ball bearing and a track onto the base plate which is fixed in the car.

So you can take the loaded jet to the water sports zone and let it into the water there.
