I did not like the designs i saw and decided to make my own. You are able to plug and play with the switch without issue.

I made so it into 2 parts, the stand (print 2) that holds either your tablet, switch or whatever. While the second part, connecting bar, is to connect the stands together to make it into a solid design.

You can change their widths to suit your needs. Make the 2 stands you need as thin/thick as you want. Then make the connecting bar as wide/long as you need.

- I think you should use a high infill count and increase top/bottom layer counts on the connecting bar to increase strength.

You can use the connecting bar as a shelf or something, I may design something.
