Update 2/5/19:

After several weeks of testing, it seems I need to increase the clip length to 200% in Cura (Uniform scaling turned OFF!) . This is because the clips tend to popped off.

- I will update this later to see if this fixes my issue

I have nothing against a belt but they are a rather pain to use.

- You need to tighten them
- Need to loosen them to go to the bathroom

Thus I designed a simple clip that allows you to tighten your pants without needing to use a belt.

- My design for jeans, I have not tested in on non-jeans.

Info

- I used a 10% infill
- I printed two for myself, I could print more if needed

Other

- I suggest you sand the sides of the clip
- I printed my clips in grey because thats the color I had, but if you print them the color of your pants, maybe people wont notice it
- I see no reason to remove the clips from pants when the pants not in use.
- There are 3 "slots" in the design, with the jeans, i was only able to use the outer two slots because jeans were hard to put into all 3 slots.
 - This is the reason I use 2 clips, however I would guess if you use this clip on more flexable material, you should be able to use all 3 slots

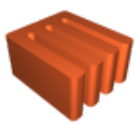

I am thinking I will make a version for animals.

- The harness for my dog, Loki, is rather loose. Thus, I want to try using this design was a way to tighten up his harness.
