Summary

A simple fan bracket to properly mount fans at the front of the case.

Just a simple fan mount I made for my PC case, sized for the noctua NF-A14 but should work fine with any 140mm fan.

I printed in PLA, .25mm nozzle with 6 perimeters, it should work fine with most materials.

The holes are a bit too big to thread M3 screws into them, so I used M3x10 screws and nuts between the bracket and case, and M5 into the fans. Regular fan screws should be long enough but I didnt have any on hand.

I hope this helps someone out there with this case :)
