So the pin that holds the headphones together on the side sheered off and I really didnt want to buy another set of headphones, these have been great for the years Ive had them. A bit of measuring and bam new pin. I did not reuse the clip that was on the original, just dabbed super glue on the inside where the pin and headphones meet to keep it in place.

To pull the old one out, you gotta dig the glue out first and also the Eclip they use. its a pain but if your careful (if its on the wire side like mine was) you will be fine. This replacement has a notch for the wire to go through, but should work fine on either side.

Hope to get another 5 years out of these headphones. They sound great.
