Summary

Miller table used for gold prospecting

[Household](#) > [Outdoor & Garden](#)

Another design in my Home Prospecting Series!

The miller table is used to separate gold from black sand in very fine concentrates. Designed to utilize a normal tap in the kitchen, let the water fall into the rear part of the table, and create an even and slow flow downwards. I've designed the part to be printed standing up, without supports to get a smooth finish on the table surface. And maybe even some help catching the gold only with the layerlines.
