Summary

Floater to indicate water level

[Household](#) > [Kitchen](#)

Tags: [espresso](#) [gaggiaclassicpro](#)

I took inspiration from the original and added more stable floating parts. The original has a tendency to tip over when water is added. The new version floats much more stable. The center blade is pretty much original. No extra weight needed.

Printing:

- to get it water tight:
 - 2 Walls
 - 2 Top/Bottom
- 0% Infill to mak it lite.
- activate "print thin walls" (cura)

As this is in contact with the water I suggest to use PETG.

This remix is based on

Gaggia Classic: Super Simple Level Indicator
