Summary

Got a cube organizer? Need a way to store it other than just stacking it? Look no further as this is fast and cheap...

This fast, easy and cheap filament storage option is perfect for any space. While the name was made due to my specific use case don't let it fool you as you can use this on tables, desks, shelves and more.

Material needed:

1/2" EMT Conduit cut to the length needed for your individual space. You should be able to get some at just about any hardware store and you may be able to get them to cut it if you don't have a means to yourself.

Any type of filament you want to print.

Print Settings:

Printer: AnkerMake M5C

Filament type: Any (I used Voxelab PLA+)

Perimeters: 3

Infill Density: 15%

Infill Pattern: Cubic

Top Fill Pattern: Monotonic

All settings can be adjusted to your preferences and still come out with the perfect storage solution.
