### Summary

Puts two 120mm blower fans in series for higher pressure.

Tags: [cpap](#) [blower](#) [120mmfan](#)

I found that two 120mm fans in series perform way better at blowing air through CPAP tubing than a single 120mm fan.

Print in the given orientation with supports for the outer ring.

I recommend <https://www.printables.com/model/285516-nf-sunrise-volcano-120mm-remote-cooling> to connect the output to a CPAP hose.
