Designed to accomodate M5x10mm screws going into 2020 aluminium extrusion.

Update 13-Feb-24:

I found it tiring trying to perfectly align the bracket with the honeycomb with the placement of the mounting holes so I added an extension for the one of the bracket pieces.

This way it's possible to loosely attach the bracket to the 2020 extrusion, secure the bracket to the honeycomb, then tighten up the bracket-2020 nuts to secure it all together.

Pros: Frustration free and no tightening trial and error.

Cons: Uses more hardware, printing requires support (I printed in the orientation seen to the left)
