This is a remix of Functional Print Fridays' Neptune 4 camera mount and Djsprints_1671703 's tension lock.

I used this camera: <https://www.aliexpress.us/item/3256804708741244.html>

Just pull the camera off of the clip and pop it onto this mount, then slide the whole thing over the X tension knob. There are also screw holes in the back to secure it more tightly.

This remix is based on

Camera mount with X Axis Tension Holder for Neptune 4 Max
