Despite the fact MB GLS is spacious, there is no simple way how to travel with bags in the trunk or behind front seats as they are constantly sliding. You can't fix small or large bags with grocery (or any other bags with equipment) in the trunk (or behind front seats). It looks like the intended car use is only for passengers and suitcases/travel bags not for daily driving ;)

After couple of test prints I found out that hook available on printables are not designed for GLS (check photo #2). While after I printed front (medium) hook I found out that back seats in GLS are little bit different than on front one, so I designed hook for rear seats (long hook). Designed also version for thin seats (short).

Testers welcomed, I think some updates needed, because the placement of the bag hook is only for bags with long straps/handles.
