A remix of cudderbup's design over on Thingiverse.

I've uploaded different versions / heights to find the best focus for you scanner.

I'm using the 0.6 mm Version with ANR glass on top of the negatives.

To use it without the ANR glass, a top cover as in cudderbup's version would be needed to get the negatives uncured.

The example scan is AGFA APX100 scanned on a V550 at 3200 dpi as a JPEG.

EDIT 2024.03.11

I've added an upper part for the holder to hold the negatives flat without the ANR glass.

This remix is based on

Epson V600 35mm,120, and 110 Film Holders

by cudderbup
