A minimalistic bedside lamp that was designed for one of my old IKEA light bulbs.

I wanted it to be as small as possible, easy to print and create a comfortable light.

The lampshade just “snaps” on the base.

The lamp socket has an outer diameter of 28mm and can be screwed into the base.

<https://www.hornbach.de/p/lampenfassung-e14-kunststoff-mit-steckerzuleitung-3m-weiss/8017652/>

The lampshade was printed with translucent PETG.

The outer layer was printed with the fuzzy skin option enabled, what makes a relay comfortable light.

The base was printed with PLA. I added some supports on the base while printing.

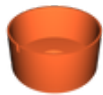

Extra cables from the socket can be stored in the base.

Printed with 0.4 nozzle and 0.2mm layer
