In the Carcassonne is a game requiring players to build a custom map by laying tiles one next to another. This grid helps keeping the map in case of any "accident" - perfect for playing with children.

The model is fully customizable (with the exception of tile count which is fixed to 4x4) - you can adjust all dimensions in case your printer needs adjustments or if you wish to use the grid for another game with different tile widths or dimensions.

Compared to parent model, this has a thicker pad, therefore the grid parts stick together better.

Printed in petG and works perfectly. If you decide to use PLA, you should increase baseW parameter inside the SCAD file due to worse mechanical properties of PLA. Black or white color seems to work best.

Print Settings

Printer Brand:

Creality

Printer:

Ender 3

Rafts:

No

Supports:

No

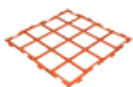

Filament: Verbatim PetG Black

Category: Toy & Game Accessories
