Lost 65mm of the bed on the left side. As I could not use the stock left wing's as it crached into the X cover motor.

Remixed it to one piece as I don't need the ability to change the height of the CR touch. With this new wing it's only 45mm on the right side of the bed I'm losing. An extra 20mm probing area on a 235mm bed is allot to gain back.

It's also designed in a way it just slides past the X motor cover.

This remix is based on
