Here is a motor mount for Lidl glider. It is designed for 2021 Mk2 version of this glider (nose is bigger than initial V1 version)

Goes well with aeropic's mod : <https://www.thingiverse.com/thing:4031359>

It has the exact diameter to fit with the JMT - Mini brushless motor F15845/6 1806 kv

as well as aeropic's folding propellers : <https://www.thingiverse.com/thing:5608492>

Use the provided template to help cutting the nose...

Beware that these motors have the wires soldered "at random"... so a second version (nose2) is available if the wires of your motor do not fit! The holes for the screws are rotated 90% between these two versions.

Printed with PET bottle filament : <https://hackaday.io/project/185196-pullstruder-from-plastic-bottle-to-pet-filament>

Print Settings

Printer Brand:

Prusa
