[basketball](#) [numbered](#) [jersey](#)

Basketball room sign for your kid or teens room with separate files with numbered cards to hang their jersey numbers off of the sign. The card holder can be glued or 2way taped on the basketball sign.

I suggest using a matte orange or one that isn't very translucent as the rectangle that connects the models will show through.

The font used on the cards is Atlanta college font which can be found at Dafonts dot com.

Download the file>right click the folder and extract> left click the TFF file once> Right click once> go to more options> install for all users with a shield next to it. If you're using Bambu studio, open a fresh screen and Bambu studio will have pulled the font in for you. It'll be under Atlanta College in your font menu, then you can add the name with the same font as the numbers.

The model isn't very filament heavy so I'd suggest just using 100% infill, same with the cards and the holder.
