Summary

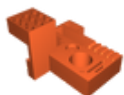

My first model, new to Printing. But this fit my tool holding needs. Maybe yours too.

Tags: **ender** **v3ke**

I printed with 0.4 nozzle, 0.2 layer height, 0.4 width, 4 walls, 4 top layers, and 4 bottom layers. I used Comgrow PLA 65mm/sec, with supports. It took about 3.5 hours. I think it turned out nice. Tools clear the print head. Holds wrenches, Nippers, 5 Allen keys. Declogger, 1 Glue or Grease, screw driver, Dial caliper, and 9 nozzles. I took Inspiration off a file I seen on here, but it didn't hold everything I wanted. I also put the .blend file with a blank as well as just the clip the create you own.
