With this model, you can now take your stream deck Plus on-the-go, allowing it to pack flat (print a rugged box for it). Simply drop your stream deck into the base, and you're good to go. Print a base for everywhere you use your stream deck.

I recommend putting a hollow area in (negative volume) during slicing, then pausing your print in the middle and putting weights inside in the middle, but it's not at all necessary... just give you some nice, added, extra weight. Rubber feet are also a good idea if your tabletop is slick.

Enjoy, and don't forget to ♥ if you do.
