This is a cradle to hold a Samsung Note4 (no case) and snaps into the TTVR modular virtual reality headset (<http://www.thingiverse.com/thing:733390>). It is very important that the corners not lift during print since the dimensions are precise and the phone won't fit if it is allowed to curl during print. To help accomplish a good print, I added a custom brim to help hold the corners down. Print with 0.2mm layer height. I added a 2nd version with a larger cutaway on the bottom. This makes it easier to remove the phone and also reduces the tendency of the part to lift during print.
