Summary

Turn an 86mm diameter soup can into a small knockbox so that you don't risk having your filter fall into the trash!

Tags: [box](#) [espresso](#) [coffee](#) [knock](#)

I wanted a knock box so that I can clear the filter without the risk of it falling into the trash and needing to fish it out (eww). I didn't feel like spending \$20 for a knock box when all I really needed was a small canister.

I happened to have soup and realized that the can was perfect for the purpose.

Printed at 100% in PLA and it has been working well so far!
