This are replacement parts for a cheap light tripod.

This is a work in progress and I will improve the design in the future. I plan to make a slot and a square washer for the bolt to print in a diferent orientation and avoid delamination on the weak points.

Meanwhile I recomend to print it in a strong material (PET, Nylon, ABS). I printed mine in PLA expentong to last a week and it is still holding.

Print it with .3 layer heigth and make it solid with perimeters. (around 5 perimeters)
