[washer](#)

Different shapes of retainers for holding a nut and washer for 5/16 bolts to the underside of my workbench. This allows me to remove the bolts holding my vise and later put them back in without having to remove drawers or use 2 sockets or wrenches to tighten them down. Appropriate length #6 screws hold them in place or you could glue them in place.

My settings:

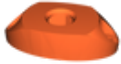

0.4 nozzle, 0.2 layer, 40% infill, tree supports, ABS, 270/110, PEI or G10
