Summary

Replaces the stock Juno part that has the sling point in the handle

I absolutely love the Juno blaster from Out of Darts, but I really didn't want the sling point in the handle. Since it was a separate part, I figured I'd modify the original to remove the sling point and keep everything else.

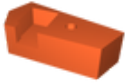

It fits great. The downside, however, is that since there isn't anything extending out of the handle, it's a bit of a chore to remove it. But, it can be swapped out with the original part when desired.

I would suggest printing with 3 perimeters all around and 15% infill.
