### Summary

Sleeve for cheap LED candlelight to create a small lit traffic cone

[Household](#) > [Home Decor](#)

Tags: [decoration](#) [led](#) [tealight](#) [trafficcone](#) [candlelight](#)

This model is a sleeve modeled to be used with cheap LED candlelights and this traffic cone <https://www.printables.com/de/model/542796-traffic-cone/comments> scaled to 50 mm.

Not much to be done here except glueing the traffic cone to the sleeve with superglue.

I printed them in PLA with the sleeve hole facing up, manual supports for the "roof" and PETG as the top support interface material.

0.2 mm layers, 0.4 mm nozzle.
