Summary

Micro EDC sewing repair kit

[Sports & Outdoor](#) > [Outdoor Sports](#)

Tags: [repair](#) [sewing](#) [edc](#) [survival](#)

Sewing EDC set in micro size.

The coil contains 3 sections for threads, each of which is wound up to 5 meters of thread. This is more than enough for emergency repairs. The threads can be wound smoothly with a screwdriver.

The central section of the coil accommodates 2-3 needles up to 60 mm long.

The threaded cap has a recess, so that the cap can be used as a thimble.

Printing Recommendations:

Layer height - 0.1mm

Seam position:

on the coil - random

on the threaded cap - random

on the outer cover - as you wish

When printing the coil, turn on the combing (avoid crossing perimeters), otherwise you may need to drill the needle compartment.

I also have a larger sewing kit:
