This is a stand to hold your Apple Watch charger.

I included 3 different files for different sizes of your Apple Watch.

This stand works with the standard, white, plastic apple charger. It doesn't matter if you have the usb-c or the normal usb version, both fit just fine.

Just print and use! No screws, tape or any adhesive needed! When it's printed just slide in the charger and press it in. You can of course remove the charger when you don't want it to be in the stand anymore. Just take something small and long like the other side of a pencil and push out the charger.

Printing tips:

- PLA

- 2 perimeters
- 15% infill (pretty much anything other than 0% would work but this is the standard :))
- Enable supports (Tree supports work the best with the automatic paint on supports but any supports work.)

Hope you enjoy this model! And if you have any questions or something just doesn't work, just message me. :)
