My polo had this knob missing from the dome light in the back seat, soooo after looking for a replacement(which are either hard to find or expensive), i came up with this simple design for a knob, there is also a ".step" file if you want/need to modify the existing knob, the small clips(legs) did not print for me luckily i had supports on and the rest of the print came out great instead of using the clips i glued it in place with some molten filament(or zipties) because if i ever need to change something in there i can just pull it out of there then melt down some more plastic and put it back(depends on how skillful you are)
