Summary

Harbor Freight flashlights are everywhere...but rarely attached to where they should be. With a magnet, problem solved!

Many of us have plenty of Harbor Freight flashlights, but they're rarely where they need to be. I threw together these pieces to--with a small strong magnet--keep the flashlights where they should be, attached to a refrigerator, toolbox, desk, or the metal object of your choice.

Magnets are 12.5mm x 2mm, approximately. The open ended holder can also be attached more permanently with double-sided tape.

Printed on heavily-modded Ender 3 Pro, TPU 95, no supports.

Created with Shapr3D.
