Hello guys.

For few months I am trying to grow succulents and other plants. Many pots there don't have any drain, so I've created one by myself. The pot consists of 2 parts as shown in the pictures. Don't forget to add small stones on the bottom of the main part or loose ground may escape.

I added photos from day 1(5 months ago) and recent ones - pot works pretty well(you can see "old" plants in the background).

Feel free to download, print it and share photos! :)
