Hi! I hand drew the Audi R8 and turned it into a 3D print. Bear with me if there are any issues with it, and please let me know if you find any so I can improve. Let me know if there are better ways to outline cars other than drawing them

I created this model with a photo that I took at a car show. Let me know if you want wall art of your car, I would love to do it!

#### Printing instructions:

If the model needs scaling up/down, just be sure to keep the height of the model to 2-3 mm for optimal strength and so that it does not snap when pulling it off the print bed. I printed mine with PLA and 100% infill. Be sure to let the print bed cool before removing to avoid warping. I printed mine with a height of 2.5 mm.

#### Mounting instructions:

I used a little bit of transparent double sided sticky tape. Let me know if I should make a loop on the roof of the car so it could be hung with a string or be used to mount with a thumbtack.

Feel free to remix! (I have no idea what the licenses mean lol)
