"Tick, tick, tick, tick, tick."

That's the sound of my Chrysler 300 while I'm rolling down the street. The sound is the result of the hubcaps bouncing around on the wheel rims. They do not fit snugly to the rim so move around in the wheel hub.

This flexible print attaches to the hubcap standoffs and provides a little bit extra height to press against the hub. The flexible material (TPU in this case) offers a bit of grip to keep the caps in place.

Hopefully this is useful to the other geezers out there still driving the 2005 Chrysler 300 touring.
