Remix / recreation of <https://www.thingiverse.com/thing:4852456>, that allows you to remove the top front bar of the X5SA (pro and non pro) and reroute the belts so that they don't interfere with your view of the printhead/printjob.

While I have printed and started installing I've yet to finish it. You will need to mod the carriages as per the original thing, you will also need to relocate the Y endstop and extend the motor cables.

I heavily advise that you reinforce the corners of your printer, as removing the top bar will probably make the printer more wobbly.

There two versions of the mount, one for the PRO and another for the standard version. Don't forget to print one in mirror.
