A simple remix to allow the Tronxy X5Sa to become a pen plotter. Simply clip the adapter to the back side of print head (in the plate where the gt2 belt attaches to). Use one of the pen holders in the original thing (<https://www.thingiverse.com/thing:3365530>).

Two versions are provided, the standard one, could be used with any X5SA (I hope), the second one is tilted for two reasons, one to clear motor in my direct drive mod (<https://www.thingiverse.com/thing:4712157>) and two to provide a better "writing" experience (pens are usually used in a slight angle relative to the paper).

PS: At the moment thingiverse is not allowing me to add this as a remix, the search can't find the original design, so checkout the original version here: <https://www.thingiverse.com/thing:3365530>, a great a simple design by pascalmakes
