updated 25. 2. 2024 | published 25. 2. 2024

Summary

I wanted a shallower angle on the blade for those extra stuck parts so i modified it.

[3D Printers](#) > [Accessories](#)

Tags: [prusa](#) [hexagon](#) [bed](#) [hex](#) [scraper](#) [spatula](#)
[printbed](#) [bedscraper](#)

I doubled the length to help get those really stuck parts off the bed and make it easier to push the scraper into the middle of the part.

For print settings I recommend 0.15 layer height and 100% infill. I also used 6 walls but i don't think that matters.
