Summary

Unlock the full potential of your Manual Focus Generic Webcam with these

[Gadgets](#) > [Computers](#)

This knob will fit onto the focusing lens for any generic manual focus webcam type out there, because the stock 'elegant' plastic won't help a lot, I designed this so the knob will grip firmly to the lens barrel. This should also fit onto raspi's camera lens module.

The Inner diameter for the knob is 14mm.

The spacer is used mainly for the webcam in the video, this spacer are meant to prevent the lens barrel to be crooked during screwing it into the threads. I partially destroyed my lens barrel's thread because lack of spacer before.
