This is an extension piece for the Leten Future Pro 708 Automatic Male Masturbator. It pushes the stroker sleeve out slightly to give a bit more wiggle room for stretching for those of us who are more endowed than the average ;P I did also notice sometimes the skin of my sack would get slightly pinched/ scraped between the moving parts, and casing of the unit. This also helps alleviate most of that.

No Supports needed. Easily clips right into place without any other adjustments, and doesn't need to be removed for normal use and storage.

I did sand/ shave down the inner and outer rim to keep from any accidental scrapes. Once I learn how to use the software better, I will round off these edges in the file itself so no manual smoothing is required.

If you have any questions or suggestions, please message me. I am still very new to 3D printing and can use any knowledge willing to be shared.

Happy Bating :)
